

Pinedale BLM Seeks Comment on Proposed Condensate Pipeline

Ultra Resources Inc. has filed an application with the Bureau of Land Management (BLM) Pinedale Field Office (PFO) for the construction and operation of a new 42-mile long, 6-inch condensate pipeline in Sublette and Lincoln Counties, Wyoming.

The purpose of the project would be to fulfill a requirement from the Supplemental Environmental Impact Statement (SEIS) Record of Decision (ROD) that Ultra, along with other operators on the Pinedale Anticline, is to install a liquids gathering system (LGS) to reduce the amount of truck traffic associated with production within two years after the signing of the ROD for the benefit of wildlife and air quality.

The proposed Ultra Condensate Pipeline Project would add infrastructure to carry condensate from the Pinedale Anticline area to the Rocky Mountain Pipeline Systems LLC terminal just south of LaBarge. From the Gobbler's Knob area of the Pinedale Anticline to southwest of the Jonah Field, the pipeline would be in corridors designated by the SEIS for the Pinedale Anticline Oil and Gas Exploration and Production Project for approximately 22 miles. The remainder of the pipeline, approximately 20 miles, would parallel the existing Rocky Mountain Power Bridger 230 kV power line and other existing infrastructure. Construction is anticipated to begin in the spring of 2010 and be completed by fall 2010.
